System 1800 Specifications:

You compute with class when you use the System 1800. Just take a peek into this American Dream Machine equipped with features for your total satisfaction!

The 1800 is fully compatible with the IBM AT®. Its 80286 CPU runs at selectable speeds of 6/8/10 MHz. It also carries a socket for an optional 80287 math co-processor for fast number-crunching. The base memory is loaded with 512 KB and can be expanded to 1 megabyte on the motherboard itself. This means that the memory capacity can be increased to a full megabyte with only an addition of memory chips. This enables the machine to run software programs with large memory requirements, more memory-resident programs, or an extra fast RAM disk.

The motherboard has six 16-bit and two 8-bit expansion slots which can be used for various add-in boards (eg., graphics, modem, memory, multi I/O, etc.) The 1800 comes with the IBM PC/AT compatible AMI BIOS which

The front panel offers front access to as many as 5 half-height peripherals. There is also a key lock to disable the keyboard and lock the case.

An easy-to-follow manual is provided with the machine, describing various procedures and operations.

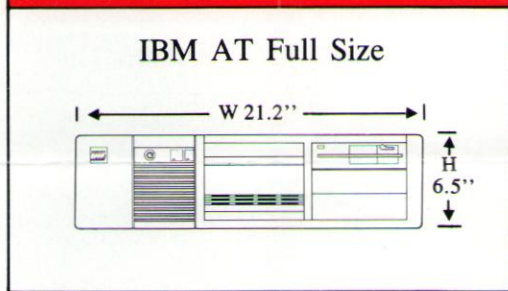

The UL/CSA approved 195 watt power supply is switchable from 120 to 230 VAC so that the system is transportable to Europe, Asia and other parts of the world.

In addition to the above features, the machine is burned-in at elevated temperature and tested at the factory in Fremont, California, to assure years of reliable service.

System 1800 Models

Wait State	Model Number
1	System 1800-0 (8 MHz)
1	System 1800-A (10 MHz)
0	System 1800-B (10 MHz)

Dimensions

includes a SETUP utility flexible enough to support up to 45 different types of hard drives.

The system comes with a Western Digital compatible combo hard drive/floppy controller and a 1.2 MB high capacity floppy drive.

The System 1800 includes an 84 key, typematic keyboard while other keyboard layouts are also available as options.

Over 30,000 units installed

Features:

- Fully IBM AT compatible
- Intel® 80286 CPU, socket for 80287
- Speed selectable 6/8/10 MHz (Depending on model)
- 512K RAM, expandable to 1 MB on the motherboard
- AMI BIOS with SETUP utility in ROM, supports 45 different drive types
- 8 Expansion slots, 2 8-bit and 6 16-bit
- Hard disk and floppy controller on a single card
- 1.2 MB floppy drive
- AT style keyboard
- 5 half-height drive openings
- UL/CSA approved 195 watt power supply
- Easy-to-use 200+ page instruction manual
- Full factory 48 hour burn-in and complete testing
- Full 1 year warranty
