

SAFE POWER™

**EXPECTS
THE
UNEXPECTED**

Guard against unexpected power interruptions which impact your equipment, data and productivity with Uninterruptible Power Systems from SAFE POWER. Our units provide immediate and reliable backup in case of a fluctuation or outage.

Three Levels of Protection

Three new SAFE POWER models - 650, 800 and 1200 - watt, feature true sinewave output, transient protection, system status indicators, audible alarms and up to 12 minutes run time. In addition, each model features a versatile communication interface that provides a variety of monitoring and control signals.

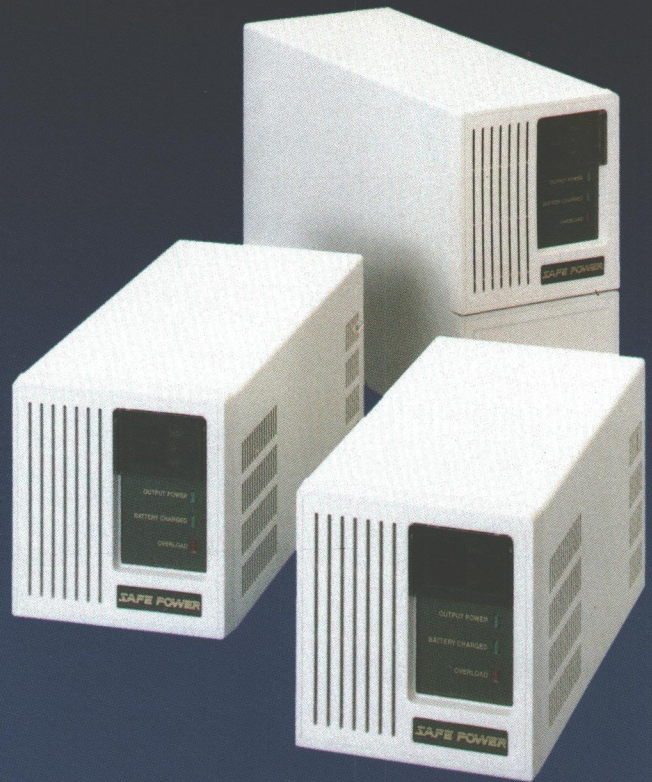

The 650, 800 and 1200 are designed to the power levels necessary to support typical 386 systems, larger micros, file servers, LANS and multi-user applications.

Play it SAFE

Protect your personal computer, workstation or network file server against surges, spikes and other power disturbances. SAFE POWER's battery-powered systems are imperative for today's high-tech, automated office environments .

For micro-computers as well as Local Area Networks, it's SAFE POWER. Always ready. Always dependable. SAFE POWER expects the unexpected.
