

# We do windows!

(and OS/2, and NetWare, and...)

Nowadays, no matter what you do with your computer, you need more memory to do it! And, Acculogic memory boards give your system the memory space you need to do it all.

SIMMply-RAM for the PC and the PS/2 are registered trademarks of Acculogic, Inc. All other trademarks and copyrights acknowledged. © 1990 Acculogic, Inc.

## Any Mode, Any Program

Acculogic memory boards can be used to add extended, expanded or system memory to your computer. Because they support any memory mode, they'll work with any software package. So, software compatibility is one problem you won't have to face.

## PC AT, XT or PS/2

Acculogic's *SIMMply-RAM for the PC* adds up to 8MB of memory to any computer with an IBM compatible PC or PC AT bus. Or, if you have a PS/2 system, choose our *8MB SIMMply-RAM for the PS/2*. Either way, you'll get a board that's easy for anyone to install and use.

## IBM, COMPAQ and Many More

In addition to our memory expansion boards, we have a complete line of SIMMs and memory modules for IBM PS/2, Compaq, Apple, Epson and many other popular computer systems.

So, no matter what kind of memory you need, we can do it. We'll even do your Windows!
