New Datran **turboCom™** easy-to-use software makes your modem perform four times faster!

- Turns your 2400 baud modem into 9600 baud
- Transfers text files up to 4 times faster on Hayes® compatible modems
- Makes 1200 baud perform like 4800, and 300 like 1200
- Powerful Datran data compression technology
- Saves up to 75% on your telephone costs
- As simple to use as the COPY command
- 100% error-free high speed protocol

DATRAN

High Performance Modem Software

turboCom™ Version 2.0

Datran **turboCom™** software transfers text files from PC to PC up to four times faster using any Hayes™ compatible modem

New TurboCom high performance modem software is breaking all records in high speed data communications. Datran's proprietary state-of-the-art data compression technology, coupled with our advanced 100% error-free high speed protocol, allows users to effortlessly send files PC to PC over any Hayes compatible modem.

Increase Modem Speed. Now, TurboCom makes it possible to send text files (letters, documents, reports, and data bases) up to four times faster than with your existing 300, 1200 or 2400 baud modem. Even programs, binary files and spreadsheets will experience faster transmission times.

Save Up to 75%. TurboCom's increased speed allows you to save up to 75% on your telephone time and costs. In real terms, the telephone company will be paying for your TurboCom in quick order.

TurboCom can be programmed for delayed unattended transmission for automatic sending when telephone rates are lowest.

Data Integrity. To optimize direct PC to PC data transfers, TurboCom was designed with an advanced 100% error-free high speed protocol.

Automatic recovery from telephone noise (up to

four full seconds) is completely user transparent. Data is transferred flawlessly.

Unattended Electronic Mailbox. TurboCom is ideal as a fast, low cost mailing system between offices or companies.

The sending PC is aware of how much disk space is available at the receiving end. If a file is transmitted with the same name, TurboCom assigns it a unique extension, i.e. !-1, !-2, !-3. If the receiving PC does not have sufficient disk space for the file you are sending, TurboCom terminates the phone connection, saving what would be wasted time and money.

Easy to Send. TurboCom is the easiest modem software to learn and use. No menus are required. It's as simple to use as the COPY command! To send data with TurboCom all you do is type:

SEND FILENAME PHONE NUMBER

To program for delayed transmission you type:

SEND FILENAME PHONE NUMBER AT TIME

That's all you do. Then, the continuing status of the transmission automatically appears on the screen until file transmission is completed.

Easy to Receive. Receiving transmitted TurboCom messages is automatic and unattended.
