

Life In The Fast LAN.

Want to see how fast our LAN boards are?

Want to see it again?

Our hot new 16-bit EtherCard PLUS16™ board is far faster than any 8-bit boards. Even faster than our own blinding fast 8-bit boards.

With EtherCard PLUS16, your Ethernet network will suddenly become more productive. And (if you'll pardon the use of a phrase seen in virtually every computer industry ad since the introduction of ENIAC), you'll get better price performance from your system.

EtherCard PLUS16 is the latest in a long line of network hits that includes our top-rated 8-bit EtherCard PLUS™ and TokenCard™ boards. Boards with higher throughput than any competitive 8-bit boards.

But don't just take our word on something this important. Take the

word of the industry's bibles.

For example, Electronic Buyers' News named EtherCard PLUS the Best Add-In Board for 1988. LAN named it the Product of the Year. And PC Digest named it winner of its highest overall rating.

Naturally, all Western Digital Ethernet and Token Ring products are compatible with Novell NetWare and work lightning fast in all IBM environments.

So if you're looking for value in network boards, look for the ones named most often by the trade pubs.

Look for the ones named Western Digital.
