High-Performance, High-Capacity  
Cartridge Tape Drives

## Irwin BACKUP™ 6000 Series Tape Drives

Irwin 6000 Series tape drives combine the high-capacity and high-performance of cartridge backup with Irwin reliability and the convenience of our powerful EzTape® software.

Models are available in 5.25-inch internal and self-powered external versions with either basic QIC-36 or SCSI interfaces. They can store up to 155 megabytes on a DC600XTD cartridge and 125 megabytes on a DC600A cartridge. And they back up fast—5 megabytes per minute!

To ensure data integrity at the time of recording, 6000 Series models perform a read-after-write verification. And, to ensure data can be reliably restored, Irwin uses EC/Tape™ advanced error correction code. EC/Tape can *reconstruct* your precious data, even if sections of a tape are permanently damaged. Tests have shown EC/Tape to reduce the probability of lost data to 1 bit in over 32 years of use.

Best of all, Irwin brings a new dimension of power and simplicity to cartridge backup with EzTape tape-control software. EzTape's straight-forward menus and context-sensitive help make it simple to use. You can backup or restore your entire hard disk with a few keystrokes. Or

you can create your own custom backup sets of specific directories, subdirectories and files to meet your particular needs. You can further define backup set elements with parameters such as date and time, file types and files changed since the last backup.

And, with EzTape you can restore groups of files, entire directories or single files—even if you performed an entire disk backup.

EzTape also includes EzStart™, a convenient feature that lets you schedule backup to run *automatically, unattended* on the days and/or times you specify.

With EzTape, 6000 Series models are the perfect backup solution for leading local area networks. The drives can operate from either a workstation or a fileserver with the capacity and speed to meet network demands.

More than 500,000 users already have chosen Irwin tape drives to protect their data; now you can say "Irwin" for your high-capacity, high-performance cartridge backup needs, too.

Irwin and EzTape are registered trademarks and BACKUP, EzStart and EC/Tape are trademarks of Irwin Magnetic Systems, Inc.
